QA Engineer / Senior QA Engineer

Allocate Software is a leading international provider of workforce management software. Our application suite helps hundreds of hospitals and healthcare organisations manage and optimise teams of nurses and doctors to improve patient care. We are a global company with 300 employees and offices in the UK, Sweden and Australia.

We are a fast growing technology company and are establishing a new software development centre in Skopje.

Producing software products to a high level of quality is crucial to our success as a company, particularly as our products are used by healthcare organisations. The company has decided to invest significantly in an exciting new Continuous Delivery initiative to improve quality and speed to market of our products.

Within the team, your focus will be to ensure the product meets the needs of the customers and is delivered to high quality. This will include both manual and automation testing.

If you are interested in working as part of an international team in a dynamic environment and are passionate about working with modern technologies then we would love to hear from you!

We are looking for candidates with:

- University Degree in Computer Science or related subject
- At least 2 years of experience in QA
- Certification from ISTQB or similar organisation
- Experience of SCRUM or other agile processes preferred
- Good written and verbal communication skills in English

If you are enthusiastic and want to work as part of a dynamic, global organisation, please send your CV in English to employment.macedonia@allocatesoftware.com. Please note that as part of this role, some international travel will be required.
