1	Course Title	Software for embedded systems					
2.	Code	F18L3W048					
3.	Study program	Software engineering and information systems					
4.	Study Program Organizer	Faculty of Computer Science and Engineering					
5.	Degree (first, second, third cycle)	first cycle					
6.	Academic year / semester 4 / winter / optional	7. ECTS credits 6					
8.	Teacher	associate professor Igor Mishkovski, assistant professor Miroslav Mirchev, assistant professor Vladimir Zdraveski					
9.	Course enrollment prerequisites	Вградливи микропроцесорски системи					
10.	Course program goals (competencies): Students will obtain knowledge to create applications for microcontrollers that will work with I/O devices. Students will be able to implement and manage different softwar configurations.						
11.	Course program content: (1) Using development environment, writing, compiling and debugging embedded programs (1) Understanding hardware aspects for the different behavior of embedded systems (1) Performances, power consumption and cost of embedded systems. (2) Basic software techniques for creating embedded apps (1) Debugging techniques for embedded applications (1) Writing programs that execute multiple I/O operations (1) Software queues for buffered data streams (1) Writing programs for periodic interrupts and clock signals (1) Writing programs for monitoring physical properties, using sensor data and actuators (1) Structured approach for writing complex embedded applications (1) Creating programs that use state-machines and RTOS for system applications in embedded systems (1) Embedded software security						
	systems (1) Performances, power of software techniques for creating en applications (1) Writing programs the for buffered data streams (1) Writing Writing programs for monitoring p Structured approach for writing com- use state-machines and RTOS for systems	consumption and cost of embedded systems. (2) Basic bedded apps (1) Debugging techniques for embedded hat execute multiple I/O operations (1) Software queues g programs for periodic interrupts and clock signals (1) hysical properties, using sensor data and actuators (1) uplex embedded applications (1) Creating programs that					
12.	systems (1) Performances, power of software techniques for creating en applications (1) Writing programs th for buffered data streams (1) Writing Writing programs for monitoring p Structured approach for writing com- use state-machines and RTOS for sy software security Learning methods: Lectures using presentations, intera	consumption and cost of embedded systems. (2) Basic hedded apps (1) Debugging techniques for embedded hat execute multiple I/O operations (1) Software queues g programs for periodic interrupts and clock signals (1) hysical properties, using sensor data and actuators (1) hylex embedded applications (1) Creating programs that ystem applications in embedded systems (1) Embedded ctive lectures, exercises (using equipment and software , invited guest lecturers, independent preparation and					
12.   13.	systems (1) Performances, power of software techniques for creating en applications (1) Writing programs the for buffered data streams (1) Writing Writing programs for monitoring p Structured approach for writing com- use state-machines and RTOS for sy software security Learning methods: Lectures using presentations, intera packages), teamwork, case studies,	consumption and cost of embedded systems. (2) Basic hedded apps (1) Debugging techniques for embedded hat execute multiple I/O operations (1) Software queues g programs for periodic interrupts and clock signals (1) hysical properties, using sensor data and actuators (1) hylex embedded applications (1) Creating programs that ystem applications in embedded systems (1) Embedded ctive lectures, exercises (using equipment and software , invited guest lecturers, independent preparation and					

15.	Teaching activity forms	15.1.	Lectures – theor teaching	etical	30 hours			
		15.2.			45 hours			
16.	Other activity forms	16.1.	Project Tasks		15 hours			
		16.2.	Independent Lea Tasks	rning	15 hours			
		16.3.	Home learning		75 hours			
17.	Assessment methodology							
	17.1. Tests	10 points						
	17.2. Seminar paper/project (presentat	10 points						
	17.3. Activity and learning	10 points						
	17.4. Final exam		70 points					
18.	Assessment criteria (points/grade)	u	o to 50 points	5 (fiv	e) (F)			
				6 (six	, , , ,			
		6	1 to 70 points	7 (sev	/en) (D)			
		7	l to 80 points	8 (eig	sht) (C)			
				`	ne) (B)			
					en) (A)			
19.	Course completion and final ex requirements	am R	Realized activities 15.1 a	and 1:	5.2			
20.	Teaching Language							
21.	Teaching quality evaluation method	qı	Internal evaluatio	n 1	mechanisms and			
22.	Course Material							
	22.1. Mandatory course material							
1								

	No	Author	Title	Publisher	Year
