

Sample Solutions BV is looking for a focused, enthusiastic and passionate PHP/Laravel developer to integrate new modules to our solid PHP websites within our Laravel based framework, delivering projects with speed and accuracy, on time to agreed deadlines. Working alongside project managers and other Back End Developers, you will be responsible for delivering and developing new challenging ideas. Beyond all else we value forward thinking, the ability to learn new things quickly, meet deadlines, build solid and robust solutions with a genuine enthusiasm for the technology and task at hand.

Requirements

General requirements and experience needed:

- 1+ years PHP, OOP and MVC patterns
- Advanced experience with Laravel 5.x
- Minimum of 6 months experience developing with Vue
- Intermediate skills with MySQL, working with dozens of models and tables, subqueries, outer joins, analysing query plans, performance tuning
- Familiar with networking patterns: API design & usage, REST + JSON;
- Understanding of front-end technologies and platforms
- Familiar with linux environment and using command line

Having the following would be an asset:

- Proficient understanding of code versioning tools, such as GIT and command line
- Familiar with Networking patterns: API design & usage; REST + JSON
- Agile methodology: Scrum / Kanban
- Positive thinking, oriented team player, ability to teach others.

Benefits

- Friendly and professional team
- Training via online courses or training conferences
- Career and professional growth
- Performance reviews twice a year
- Comfortable office facilities (kitchen, coffee machines, etc.);
- Open communication
